Amarillo Laser & Vein Clinic Ammar Jarrous, MD, FACS

Although Dr. Ammar Jarrous has a long history in cardiac and vascular surgery, his specialty and passion is vein ablation, which is good news for Amarillo and the surrounding region.

"My vision for the stand-alone vein clinic is to treat patients with vein disease in a comfortable atmosphere. Everything can be taken care of in one place," he says. "You don't have to travel to Dallas anymore for these things. The technology is here in Amarillo."

Dr. Jarrous completed his surgical training at Georgetown Medical Center in Washington D.C. and completed his Cardiovascular Surgery Fellowship at the George Washington University, also in the nation's capital. However, by 2001, Dr. Jarrous was ready for a change of scenery and began searching for a smaller town in which to settle with his wife and three daughters. The family relocated to Amarillo shortly thereafter.

Dr. Jarrous was the first in Amarillo to use the minimally invasive technique for treatment of varicose veins, and to date has performed the largest number of vein procedures in the panhandle with great results.

"The main thing we treat is venous disease, which can cause complications for many people and is a health issue that has gone unrecognized for years," he says. "Minimally-invasive procedures are done in the office and often improve quality of life."

Amarillo Laser & Vein Clinic offers a wide range of treatments for venous disease including laser vein ablation, radio frequency vein ablation, endoscopic vein stripping, sclerotherapy and lase and spider vein treatment.
